

Great session!

Maya | LetterQuest

2026-09-10 Report abcd1234 Generated 2026-09-10 01:08 UTC

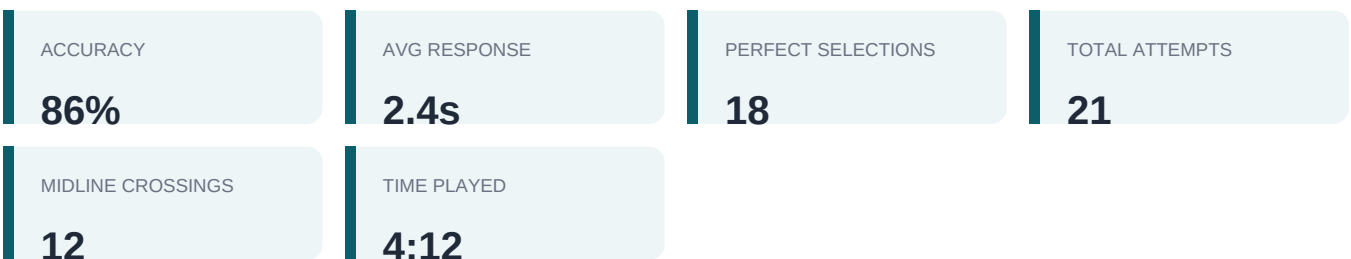

Performance

78 LPI SCORE

Session detail

Primitive reflex patterns

Early movement patterns that usually settle as a child grows. Seeing one still active points to where practice may help.

Hand-to-Mouth

ALSO WORKS ON

Hand-to-Mouth Reflex

The hand tends to drift toward the face during effort, which this game gives plenty of.

Settled

Pattern did not show up this session

Visual & vestibular function

These are not primitive reflexes — they are lifelong responses and eye-movement skills that should be working well at every age.

VOR

Vestibulo-Ocular Reflex

Working well

Responded as expected most of the time

Eye Coordination

Developing

Present but not yet consistent

What we noticed

Maya kept a steady pointing finger throughout, and reached across the midline without the arm pulling away.

Nesture describes movement patterns to guide practice. It is not a medical assessment and does not identify any condition.
